Comments:

I would absolutely recommend TrueERP to a friend or colleague. ERP is user friendly, has helped us with our daily business processes and I am always able to call to get real time support.

Pros:

It's great from the accounting side because everything is linked! I also really like the ability to drill down into financials to easily be able to see where the numbers roll from.

Cons:

That you can't drill into locked transactions without changing the closing dates in the software preferences, but I know once we update to the latest version we will have an option to include data prior to the closing dates in the main financial reports. It would also be nice to have an access level that makes all previous months read-only.

Recommendations:

I like to print out my financial reports as I run them to help me see what changes were made in between dates.
